Association between childhood exposure to violence and experience of dating violence as a young person: Gender Variations

A Cross-sectional survey among 400 students in a selected federal higher institution in Southwestern Nigeria

- 6 in 10 females experienced violence as a child
- 4 in 10 males experienced violence as a child

- More females had significantly experienced psychological violence
- More females reported experience of sexual violence
- Females more likely to have experienced dating violence in adolescence (p<0.01)

- More males had significantly experienced physical violence (p<0.01)

Childhood exposure to violence

Dating Violence
