SVRI, 22 October 2019
14:30–16:00 Prevention programmes
Background

• Gender-based power dynamics underpin many relationships.
  – These dynamics place both women and men at risk of negative health outcomes such as HIV/STI and violence.

• Adolescence presents a window of opportunity for interventions that examine power in sexual relationships and discuss related health behaviors, sometimes before these behaviors begin to manifest.

• We examined changes over time in relationship power & experiences of violence among adolescent girls and young women (AGYW) enrolled in DREAMS.
Study sites: urban & peri-urban site, Kisumu county, Nyanza province

HIV prevalence among adults and adolescents aged 15–64 years by region, *Kenya HIV Estimates report*, 2018

There were wide geographical variations in HIV prevalence in Kenya with Nyanza region being disproportionately affected.

Kisumu county

- Median age at 1st:
  - sex: 16.2 yrs
  - marriage: 19.1 yrs
  - birth: 19.4 yrs
Study design & data collection, Kenya

Round 1
Oct 2016–Feb 2017

Round 2
Oct–Dec 2018

Mixed-methods study design

• **Quantitative survey** with AGYW enrolled in DREAMS, surveyed during Round 1 & again after 16 months during Round 2

• **In-depth interviews** with AGYW enrolled in DREAMS, after 3–6 months & after 12+ months
### Sociodemographic characteristics

<td>Ever had sex</td>
<td>60%</td>
</tr>
<tr>
<td>Lost 1 or both parents</td>
<td>47%</td>
</tr>
</tbody>
</table>
Why do we care about relationship power and sexual violence among AGYW?

High levels of sexual violence from partners in the last 12 months:

19% (n=597; Kisumu, Kenya)

AGYW who experienced sexual violence were 2x as likely to report an STI symptom, and anxiety and depression

Having relationship power strongly associated with:

✓ Less sexual violence
✓ More condom use at last sex
✓ More knowledge of partner’s HIV status

Mathur S et al. (2018) High rates of sexual violence by both intimate and non-intimate partners experienced by adolescent girls and young women in Kenya and Zambia: Findings around violence and other negative health outcomes. *PLoS ONE* 13(9): e0203929. [https://doi.org/10.1371/journal.pone.0203929](https://doi.org/10.1371/journal.pone.0203929)
AGYW engaged in DREAMS reported higher power in interpersonal relationships over time

<table>

AGYW’s relationship power in Kenya

AGYW who agree ...

My partner has more say than I do about important decisions that affect us.*

- Round 1: 45%
- Round 2: 32%

If my partner wants to have sex, he would expect me to agree*

- Round 1: 57%
- Round 2: 47%

When my partner and I disagree, he gets his way most of the time*

- Round 1: 38%
- Round 2: 32%

*p<0.05
AGYW perspectives on DREAMS program benefits: Increased self-worth/goals

- AGYW described self-worth and control in terms of their relationships ("take care of themselves" & "not to be cheated")

"Like issues regarding relationships we were taught... a boy shouldn’t cheat you, lie to you with 50 shillings, and after making you pregnant they leave you with your mother. It taught me to take care of myself and not to be a cheap person even if lured with something small I just go."

—15 yr old, Kolwa East
AGYW perspectives on DREAMS program benefits: Increased confidence/assertiveness

- Most AGYW reported being able to assert themselves in the face of pressure as a result of the DREAMS program.

  ...what I learnt mostly is how to say No [to sexual advances] because...we were taught how to say no and mean that no is a no. And truly even now if someone comes for me [sexual advances] I can say no. ...So at least now I have that confidence to stand up in front of someone and to tell them no and I mean what I say....

  — 17 yr old, Nyalenda
AGYW enrolled in DREAMS report lower physical and sexual violence from partners and non-partners over time

<table>
<thead>

<td>Among all AGYW</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sexual violence from non-partners</td>
<td>26</td>
<td>17***</td>
</tr>
</tbody>
</table>

- Regressions confirm that AGYW are less likely to experience sexual violence from partners (Adj. IRR 0.43 (0.31-0.59) and from non-partners (0.65 (0.53-0.81) over time.
- Note: similar results in Zambia and Malawi

***p<0.001, Regression models adjusted for age, current schooling, marital status, orphanhood status, continuity of program exposure, and site-level clustering
Implications

• Power in interpersonal relationships can accentuate HIV risk
  – Unpacking these relationships can provide useful insights for strengthening program/policy
  – Should be more consistently measured in programs

• AGYW enrolled in DREAMS report more power and fewer experiences of violence over time

• Need closer examination to assess if shifts in interpersonal power & experiences of violence are attributed to program exposure
